

Press release

Scheer Digital World Congress 2018 – Kap Europa, Frankfurt/Main

Enterprise 4.0 - Process Automation and Digital Business

With the new product suite Scheer PAS, the Scheer Group presents innovative digital solutions for companies with robotic process automation, artificial intelligence, blockchain and process mining.

Saarbrücken, 09.07.2018

Robotic process automation, artificial intelligence, blockchain and process mining – these are new technologies and concepts for corporate management which are changing business models and the world of work. The focus of the Scheer Digital World Congress 2018 is on these as well as innovations in industrial production and reports on experiences from the world of S/4 HANA. The topics of process automation, industry excellence, business competence and robotic process automation will be discussed in different Congress tracks. Customers will present on best practice experiences and process experts venture a look into the future of Enterprise 4.0. The key-note speakers Prof. Dr. August-Wilhelm Scheer und Dr. Ferri Abolhassan, Managing Director of Telekom Services, also invite you to a stimulating exchange of views and experiences.

„A company will be successful in Enterprise 4.0 if it is prepared to take the offensive in its digitization. For this it needs a positive attitude towards new and also alien technologies. It requires strategic thinking, knowledge of new digital concepts, methods and technologies and the courage to question old, thus far successful, business models and to leave these behind.“ So says Prof. Dr. August-Wilhelm Scheer who will be introducing his new book “Unternehmung 4.0” to participants at the Digital World Congress.

After the overwhelmingly positive response to the format of the event the Scheer Digital World Congress 2018 is now taking place for the third time in the Kongresshaus Kap Europa in Frankfurt. The Congress offers company managers, leaders and decision makers from specialist departments and IT an interactive platform to showcase and discuss innovative strategies, new business models, business solutions and technologies for the successful digitization of businesses.

The Scheer Digital World Congress will focus again on presentations of real-world projects, reports on and examples of successful digital transformation projects and the technologies that drive them. Participants can put together their own individual program agenda. Varied formats such as speed dating sessions and specialist podium discussions give participants the opportunity to understand in greater detail how their companies can seize the opportunities provided by digitization, to implement them and to benefit from them.

More information on the agenda, the registration forms and further event information can be found here: <https://www.scheer-group.com/en/company/news-events/events/scheer-digital-world-congress-2018/>

The event in overview:

About Scheer GmbH

As a consulting and software house Scheer GmbH supports companies in the development of new business models, with the optimization and implementation of efficient business processes as well as with the dependable operation of their IT systems. The integrated architecture of the digital solution house comprises consulting services and products: it offers dependable solutions for the digitisation of business models and processes as well as for the implementation of new technologies in digital business.

Scheer GmbH is the flagship company of the Scheer Group which operates in various European countries as well as in the U.S.A., Saudi Arabia, Singapore and Australia.

As an SAP Lighthouse Partner Scheer advises customers on their way towards the meaningful and efficient implementation of SAP and SAP S/4 HANA. Current further developments in ARIS solutions ensure the quality of processes in innovative business models.

With the Scheer PAS product suite (cloud-based or on premise) customers can realise process automation 4.0 and thus the end-2-end digitisation of their companies.

Customers benefit from high levels of sector expertise gained from diverse consulting projects, professional IT implementation and the possibility of having their applications or entire IT -architecture run and managed in the Scheer Group's own data centre.
